

WRINKLE FREE - MIST

Unique formula that relaxes fibres to help release wrinkles.

PRODUCT DESCRIPTION

WRINKLE FREE MIST is a “dressing” for fabric and drapery. Formulated to help control pleating, folding, draping and overall handling. Safe to use on most fabrics.

WHERE TO USE

- ◆ For removal of creases and wrinkles.
- ◆ For shaping of folds on new and cleaned draperies.
- ◆ Assists on hard to iron fabrics.
- ◆ Revitalises crushed velvet.

HOW TO APPLY

Can be applied with any conventional hand held trigger sprayer bottle.

Pleated Draperies: - While hanging, draperies should be put into a closed position. Set the trigger sprayer at the wide fan spray (mist) position. Holding the sprayer 30 to 50 cms from the surface, apply WRINKLE FREE MIST evenly between the pleats. Avoid saturating the surface. On completion of the application, adjust the draperies to a partially open position. If any wrinkles or creases are still present, apply additional WRINKLE FREE MIST to both sides of these areas and “press” these out by applying finger pressure, to these areas.

Flaring Pleats: - Using the same method, as above, the Wrinkle Mist should be applied to the draperies while in the closed position. Immediately after this application, adjust the draperies into a full open position and tie the bottom loosely. Apply additional WRINKLE FREE MIST where touch ups are required. After the product has evaporated (approximately 45 minutes), untie the draperies.

CAUTION

Before using, fabrics should be tested for colourfastness. It is highly recommended that you always test the substrate to which you will be applying **WRINKLE FREE MIST**. The application should be in a well-ventilated area and instructions on the labels should be carefully followed. Do not use on fabrics that are treated with fire retardant.
